## Across

[2] The giant ball of fire that brings light and warmth to Earth. [3] The giant ball we live on, spinning in space and creating day and night.

[4] The eight planets, including Earth, that make up our solar neighborhood.

[5] The bright celestial body that shines at night, reflecting sunlight. [7] This retired sailor explains how Earth's movement a ects day and night.

[10] The model Professor Luna uses to show Earth's rotation and di erent parts.

## Down

[1] This wise astronomer teaches Lily about Earth's movement and the solar system.

[2] When the sun disappears, these twinkling lights emerge in the night sky.

[6] The path planets take as they travel around the sun.

[8] Our planet spins on this imaginary line, creating day and night.

[9] The opposite of day, when stars twinkle in the darkness.
